CHEMICAL DILUTION AND DELIVERY SYSTEMS

autosmartaustralia.com.au

Chemical Dilution and Delivery Systems

AutoSmart Australia provides a range of chemical dilution and chemical application systems, which provide a reliable method of dilution and application of chemicals.

- Accurately and safely control the volume of chemical used in application.
- Saves money by preventing overuse.
- Maintains consistent product quality.
- Improved WHSE Work Health Safety and Environmental Profile.
- Isolates the user from the neat, concentrated product.
- Workers only contact diluted product.

SMART MIX

AutoSmart's Smart Mix dilution system takes a holistic approach, satisfying not only the accurate chemical dilution for the client, but also satisfying WHSE Work Health Safety and Environment requirements.

AutoSmart's Smart Mix dilution system Features:

- Space for up to 2 Seko wall mount dilutors.
- Display for quick and easy access to all relevant safety data sheets.
- Display for quick and easy access to product information charts.
- Clearly displays relevant product pictograms, hazard statements, signal words.
- Clearly prescribes all relevant P.P.E. required for each product.
- Reference point for all relevant safety documentation to satisfy WHSE expectations.

Seko wall mount dilutors provide automated and accurate chemical dilution. Available in single product and 4 product dilutors with both high flow bucket fill and low flow bottle fill capabilities. Seko wall mount dilutors provide peace of mind that precise dilutions of chemicals are automatically maintained. Set and forget system, the Smart Mix streamlines the chemical dilution process.

SMART CAR SPRAY SYSTEM

The Smart Spray System is a low-pressure chemical delivery system which applies a consistent stream of accurately diluted chemical products. A water source is all that is required, the Smart Spray System relies on venturi pickup and dilution tips to accurately dilute and dispense our products.

- Perfect for applying traffic film removers, TFRs, degreasers and low viscosity vehicle detergents.
- Durable 15 metre hose and chemical resistant lance.
- The Smart Spray System connects directly to the water source, removing the need for electricity or compressed air.
- Isolates the user from the neat, concentrated product.
- Workers only contact diluted product.

PIG TAIL LANCE

AutoSmart's Pig Tail Lance is a unique high foam delivery system for pressure washers. The two-lance system uses a low-pressure foaming "Pig Tail" lance to deliver chemical in a high-volume thick foam via a chemical pick up connected to a pressure washer. By changing the quick connect lance to the high-pressure lance, chemicals are prevented from entering the water flow for a clean, high-pressure rinse.

- Perfect for applying traffic film removers, TFRs and low viscosity vehicle detergents.
- Accuset endline restrictor tips control fixed dilutions.
- Isolates the user from the neat, concentrated product.
- Workers only contact diluted product.

SNOW FOAM CANNON/HYDROFOAMER

AutoSmart's foaming gun attachments provide a simple and convenient method of foam delivery, both in low and high-pressure systems.

- Snow Foam Cannon: Attached to a pressure washer, the Snow Foam Cannon produces a high volume, high foaming spray that can be narrowed or widened with the twist of the nozzle. Chemical dilution is also adjustable during use.
- Foam Gun: AutoSmart's Foam Gun features a garden hose connection, using regular water pressure. Chemical concentration is adjustable.
- Hydro Foamer: Large 2.8L foaming sprayer with garden hose connection. The Hydro Foamer uses metering tips for chemical dilution rates.
